EDUCATION

University of Central Florida, Orlando
BS, Computer Science
2005

PROFILE

My python knowledge is strong and I can learn new technology with speed and ease. My professional experience covers eight years programming in Unix-like environments. I have worked as an individual, part of a team, and as a manager. From this experience I am confident that I can work effectively with all types of people.

EXPERIENCE

Manager, Software Development, CMG Technology Atlanta, GA   6/2012 - Present

I manage a team of seven developers. My responsibility includes delivering projects relating to the core platform and revenue optimization. This year I lead an integration with Google's DFP API which saved the RevOpt department a hundred man-hours in migration effort. I organized the Cox Media Group presence at DjangoCon this year which included; making a recommendation on how many employees to send, budgeting and forecasting the cost, led creative ad creation, and representing my company in the community.

Software Developer, CMGd Atlanta, GA   6/2010 – 6/2012

I helped build a massive Django CMS called Medley which serves 6M request/day. I maintained an ubuntu virtualbox image and setup scripts containing all that is necessary to start contributing to our CMS in an hour or less. Over the course of a year I presented four lunch and learns on a variety of technical topics. I co-taught a six session class for all members of our team on proper unit-testing. I mentored a developer who is new to the software industry. My advice on matters relating to python, Linux, and git are highly sought after. Recently I have lead an effort to improve and simplify the ad management system that enables our advertising team to generate a large portion of our revenue.

Software Engineer, IDEAL Technology Orlando, FL   10/2005 – 6/2010

I worked on development, operations, and testing on STRIKE™ a digital media exploitation device. We delivered this system in six months. My influence brought functional specification to our development cycle. I have leveraged open source libraries to create custom filesystem drivers in userspace. My pyGTK code allows users to customize the way STRIKE extracts data, analyzes data, and display data intuitively. I designed and wrote a process that is used to provide in-field updates to our customers. In this position Also, I mentored junior developers by giving talks, reviewing their code, providing constructive feedback, and sizing tasks appropriately.

Programmer, International Aviation Advisors Orlando, FL   4/2003 – 12/2004

I maintained and modified an online value forecast simulation written in c and Perl. My duties included code verification, web application development, and scripting tests.

Jr. Systems Administrator, Quasar.net Orlando, FL   1/2002 – 2/2003

I managed and maintained debian based Linux web servers. I wrote scripts in Perl to facilitate bandwidth reporting.
